

Cover Letter

Dear Hiring Manager,

I am excited to apply for the QA Engineer position. With over 10 years of experience in state radio frequency control and technical compliance, combined with hands-on experience in front-end development and quality assurance, I bring a strong mix of technical depth, analytical thinking, and practical delivery.

My background includes manual and functional testing of web and mobile products, clear bug documentation, usability improvement, and participation in full-cycle website development and optimization. I also bring experience coordinating teams, working with technical documentation, and delivering projects with strong attention to quality and detail.

I have expanded my expertise in QA through practical work on the Diia ecosystem and other digital products, including web and mobile flows. This experience helps me contribute effectively to high-impact products where reliability, compliance, and clear communication matter.

Why I can add value

- Strong technical foundation in HTML5, CSS3, Tailwind, and JavaScript, which helps me analyze issues precisely and write clear bug reports.
- Solid understanding of standards, technical specifications, and system behavior from my experience in radio frequency regulation and compliance.
- Leadership and communication skills built through managing teams and working closely with stakeholders, developers, and clients.

I am currently focusing on building a long-term career in IT and would welcome the opportunity to discuss how my experience can support your team and projects. My portfolio is available at portfolio.

Thank you for your time and consideration.

Best regards,

Yevgeniy Storozhenko

QA Engineer & Front-End Developer
